Hariharan Balasubramanian & Abishek Vinodh

The absolute rulebook to build a
gaming super-app

Why Super Apps?

Mobile OS is a duopoly.

Riders on the road who go from point A to point B.

- Taxi Service
- Food Delivery
- Grocery Delivery
- Pick-up and Drop items

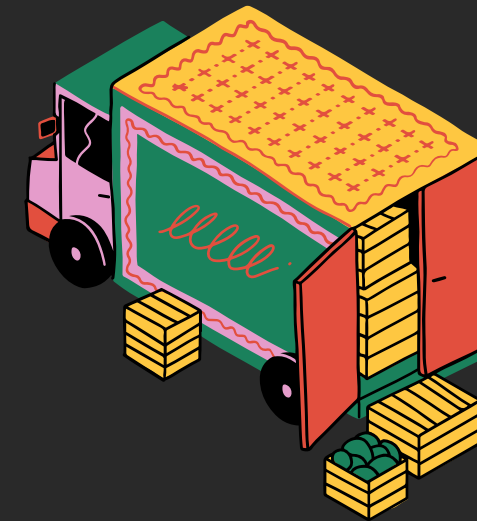

Loading times across apps.

Use a simple supply chain and deliver complex services.

Money-in and Money-out.

Use a simple supply chain and deliver complex services.

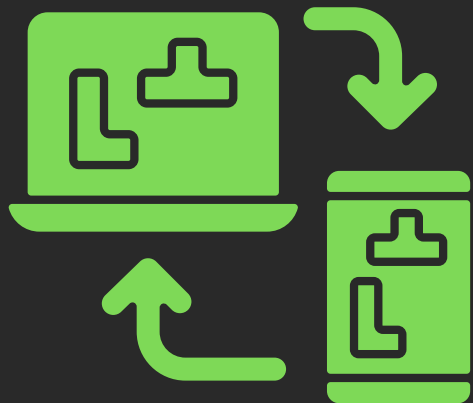

Why NOT a Super App?

Inevitably cluttered.

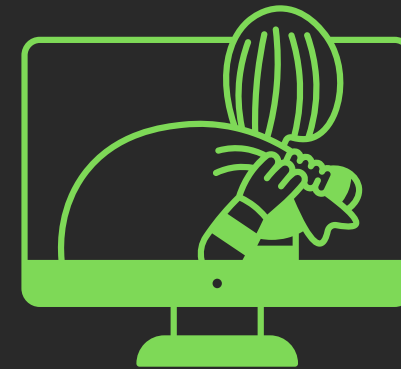

Not easy to vertically integrate.
Similar services but distinct process.

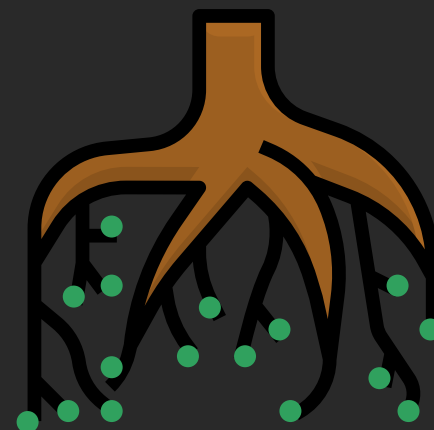

Cross-platform experience.

Data privacy concerns.

Mobile gaming is huge. But why?

Services $\propto$ Endpoints

Behavioral challenges

Can't be a feeder.

Who are the competitors?

Other Super Apps?

Google Assistant, Siri.

Passive interaction is the future.

Steam. 'Nuff said

Cloud Gaming Services
Native-App.

Google Stadia, GeForce Now!

Subscriptions like Xbox Game Pass

Yes, we are serious.

Impossible to vertically integrate such services.
BE AN AGGREGATOR.

GUIDING STATEMENTS

RULE I: RESPECT THE THUMBS

People will be using your app for a LONG LONG time

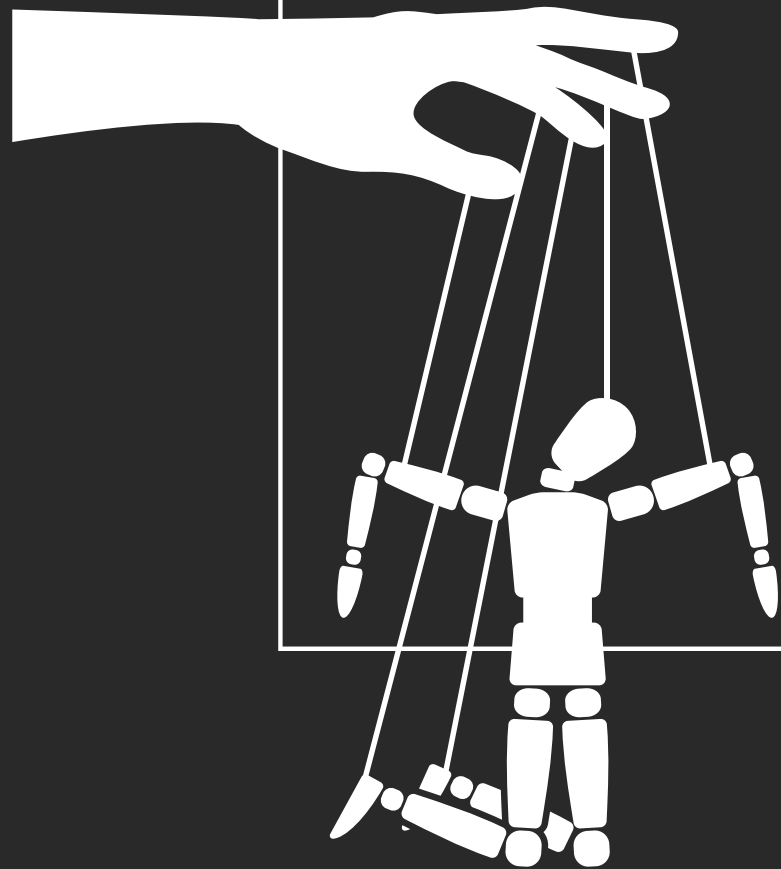

RULE II: DON'T RESPECT THE THUMBS

Sorry buddy, in the end - it's business.

Change the user : Provide traditional methods of navigation. Pitch the superiority of your gestures and proprietary navbar and make people enable it.

RULE III: ACKNOWLEDGE OTHER PLATFORMS

Because your users will go there anyway.

Cloud Gaming CAGR is 64%

Economic Growth is correlated to non-mobile platforms

RULE IV: BUT PRETEND YOU ARE THE ONLY ONE

You are an aggregator.

RULE V : THERE IS NO PERFECT TOOL.

Use the right tool for the right job. Go black and white
Just like this slide.

Dark Themes for Media. Light Theme for Articles, Text &
Financial Transactions.

RULE VI : BE INDIFFERENT

Don't specialize the UI for different services. Build a homogenous UI.

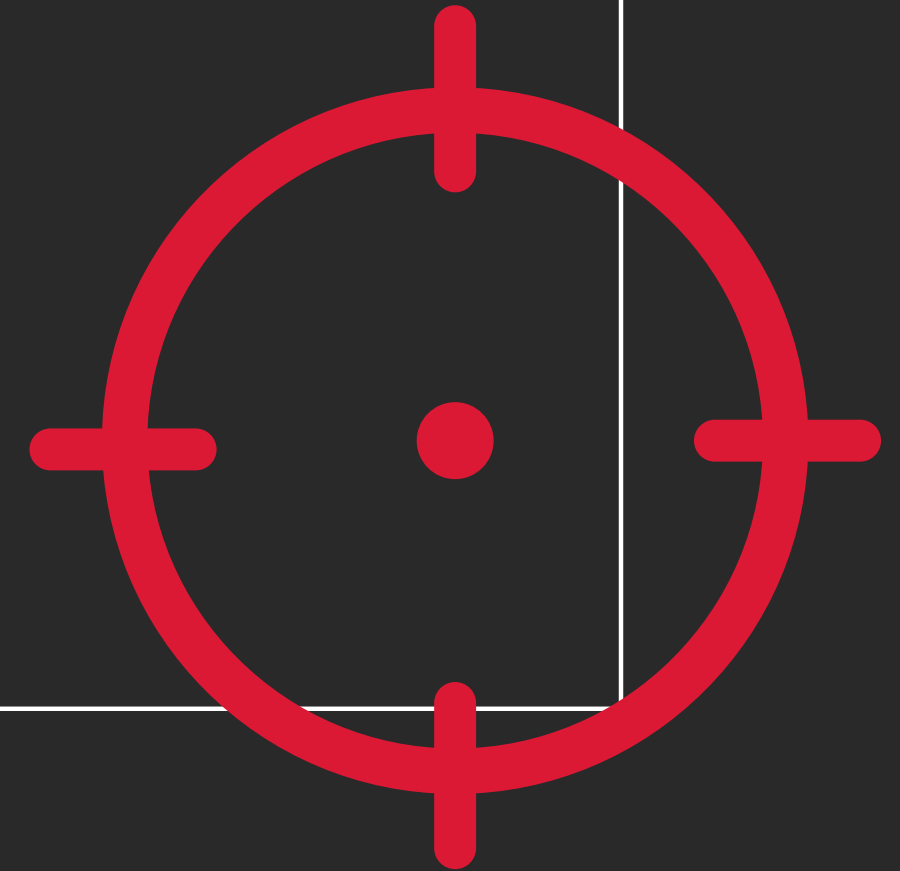

User should not feel like "I am in the stream section " or "I am in the community section "

RULE VII: PERSONALIZE

Use metadata to deliver a targeted experience.

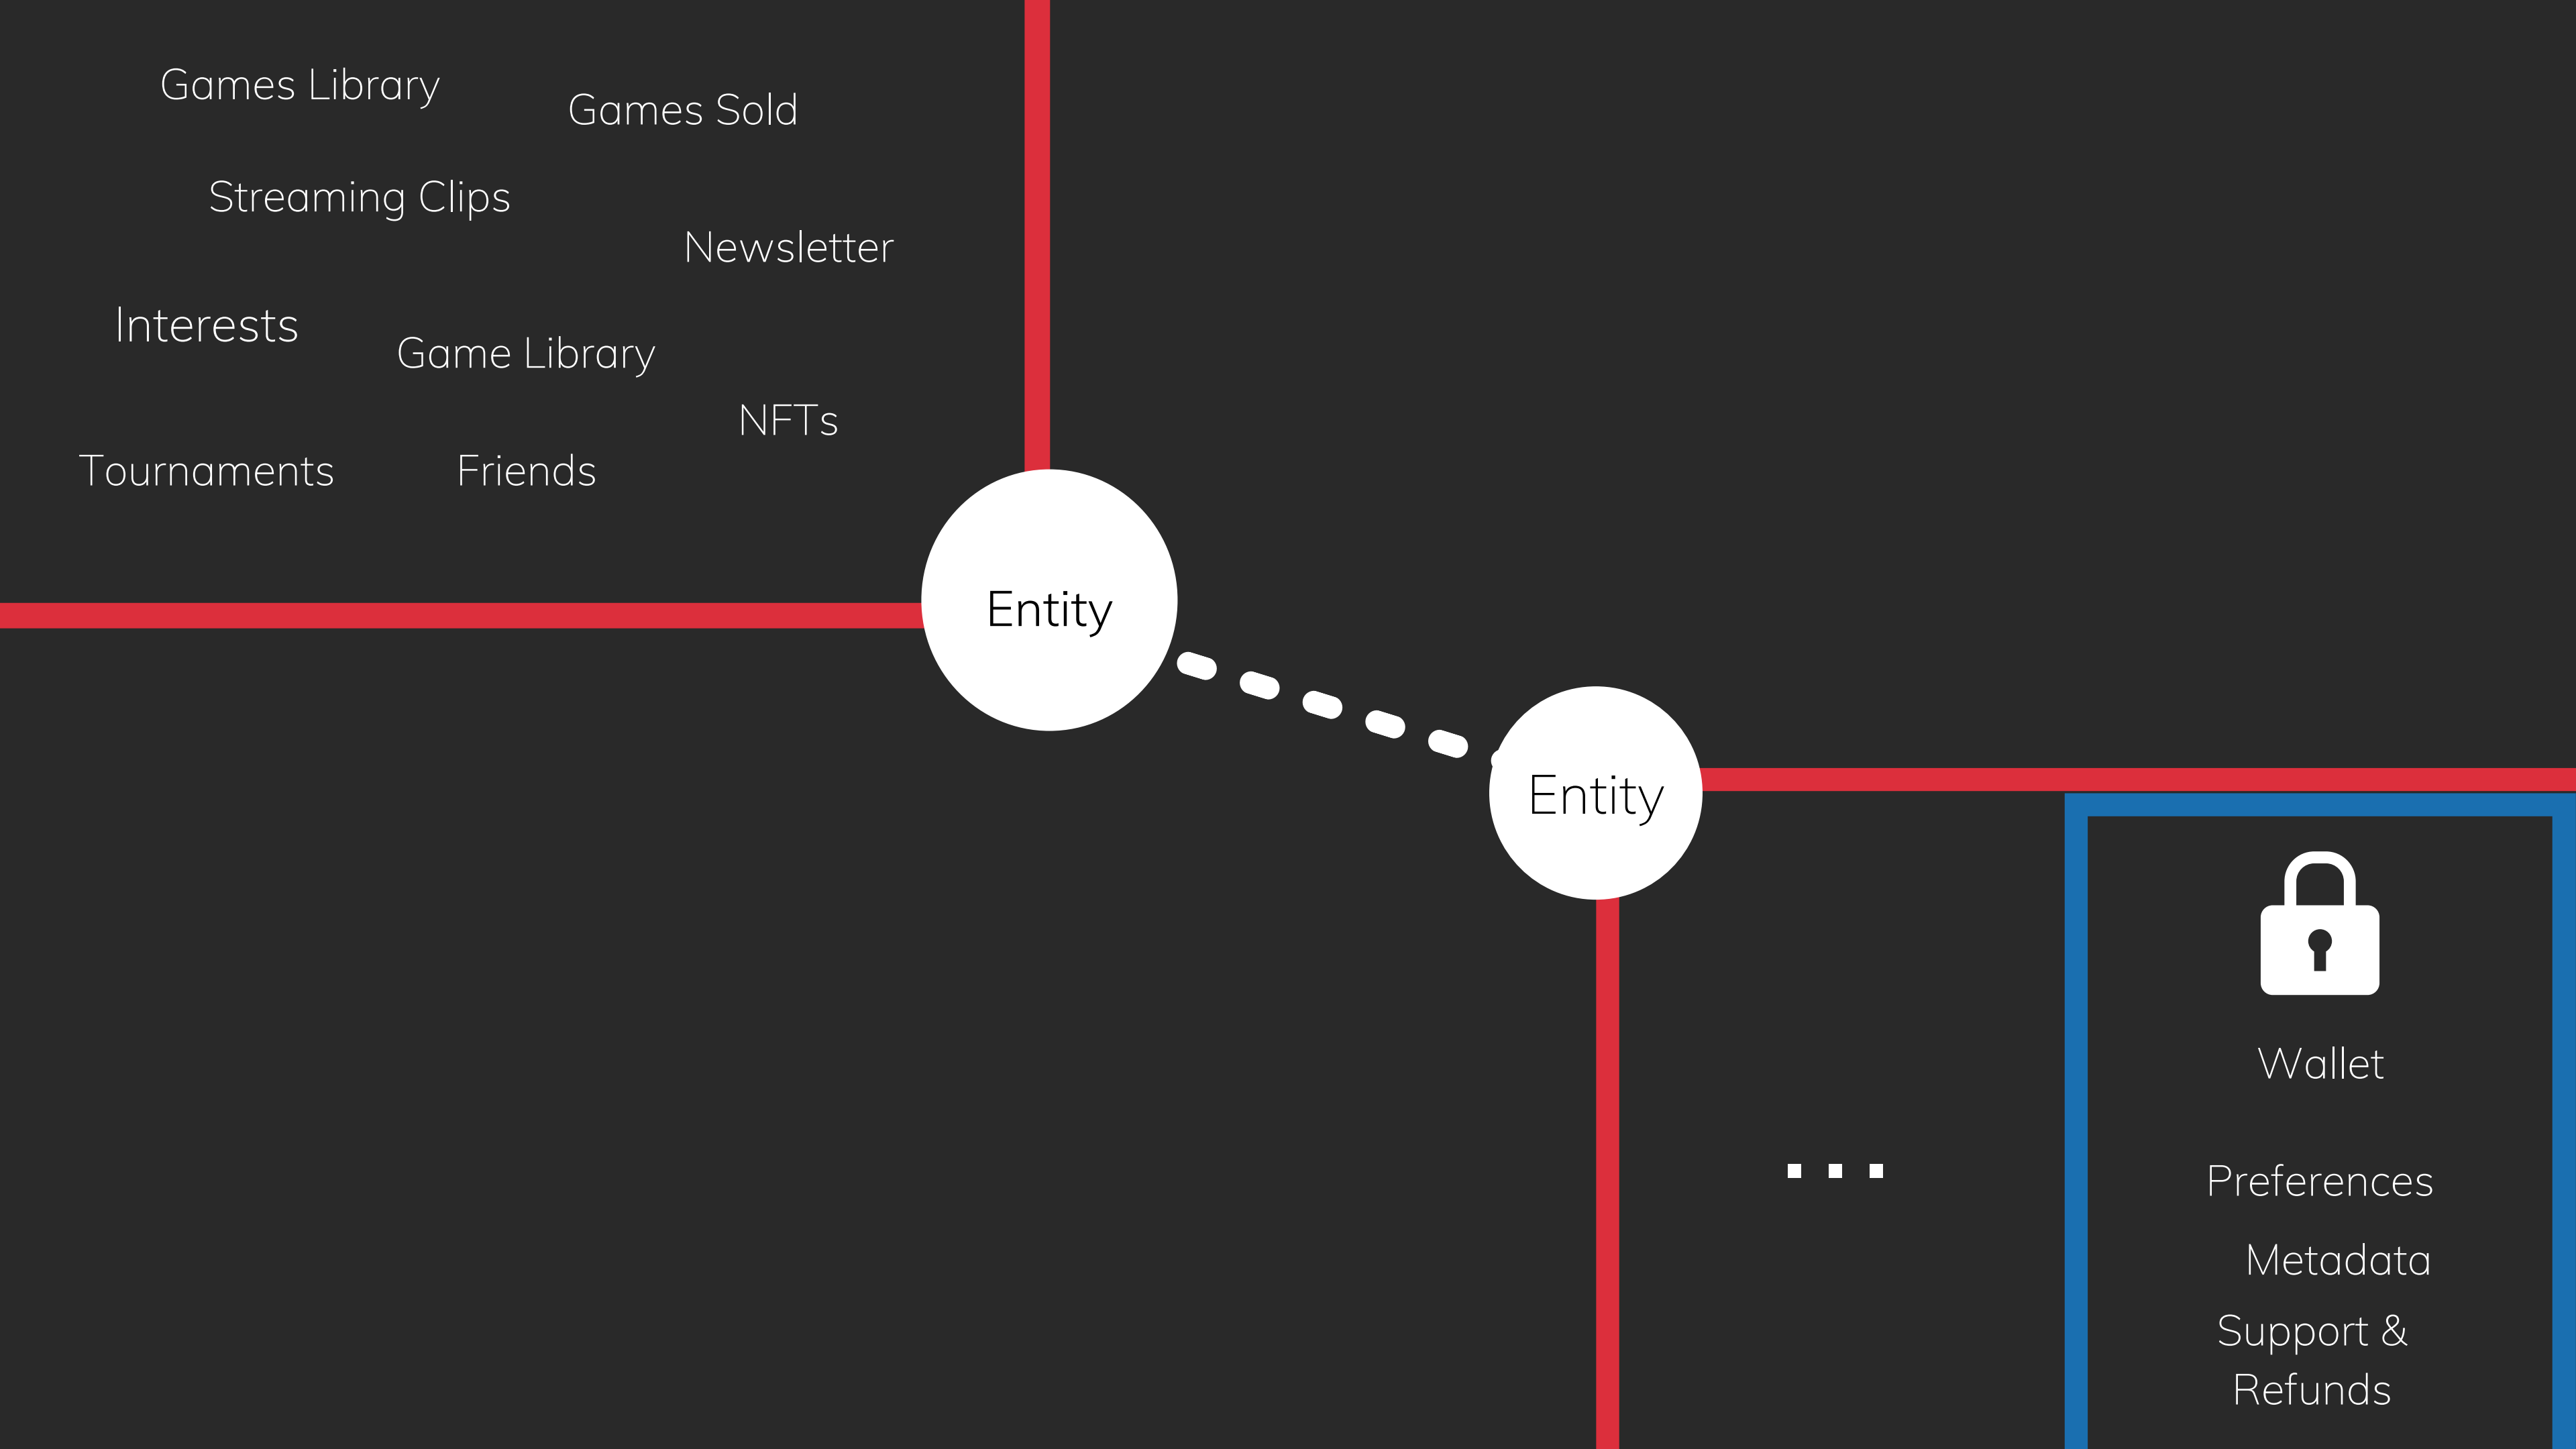

RULE VIII : INCENTIVIZE & VALIDATE

Gamify the gaming app. Encourage "collection" as a behavior.
Validate the user in their immediate network.

"You have saved over 2hours by opting-in for gestures in GameX"
Breed subcommunities - provide them tools that they cant find
anywhere else.
